The screenshot shows the Wikipedia homepage. On the left is the Wikipedia logo and navigation links. The main content area includes a welcome message, a featured article about Sale, and a search bar. The search bar contains the text 'Elastic', and a dropdown menu is open, listing search results such as 'Elastic modulus', 'Elasticity (physics)', and 'Elastic collision'. The dropdown menu is highlighted with a blue background for the top few items.

Why Elasticsearch?

Artigos publicados no WER

Artículos publicados en WER

Papers published on WER

WERpapers disponibiliza os artigos publicados nos anais de cada [WER](#). O acesso pode ser feito pelo sumário dos anais (para cada edição) ou por busca livre utilizando-se a máquina de busca Google (para todas as edições). A busca Google é livre e acessa os artigos em pdf.

WERpapers pone a su disposición los artículos publicados en los anales de todos los Workshops [WER](#). Es posible acceder a los mismos utilizando el resumen de los anales (para cada edición) o mediante el motor de búsqueda Google (para todas las ediciones). La búsqueda en Google permitid acceder a los artículos en formato pdf.

WERpapers makes it possible to access [WER](#) published papers. The access can be done for each edition or by using the Google search engine. Google searches pdf files in all WER editions.

Requirements Engineering Workshop (S1)

1 - **A Collaborative Approach to Capture the Domain Language** . *Leandro Antonelli, Gustavo Rossi, Alejandro Oliveros*. Anais do WER15 - Workshop em Engenharia de Requisitos, Lima, Perú, April 22, 23, and 24, 2015, pp . [\[pdf\]](#) [\[scholar\]](#) **Downloads: 28**

Abstract: Software development is a succession of descriptions in different languages where a previous description is necessary for the next one. Thus, it is important to begin software development with requirements that are as correct and as complete as possible. Although some literature holds the belief that correctness and completeness are two attributes that requirements specifications must satisfy, we know that these attributes are very difficult to meet. However, we have to find ways to diminish the level of incompleteness and deal with the possible conflicts that do arise in the requirements context. Defining the domain language before specifying the requirements is a way of coping with this problem. Nevertheless, it is hard to produce a domain language specification when there are many stakeholders involved. We rely on collaboration in order to foster the cooperation of the stakeholders, thus they are able to explore the differences constructively and search for solutions that go beyond their own limited views. In this paper, we propose a strategy to capture the domain language in a collaborative way using Language Extended Lexicon and we show a preliminary validation of the proposed strategy

2 - **Extração de requisitos apoiada por técnicas de Inteligência Artificial embutidas em ferramentas de apoio**. *Cristiane Aparecida Lana, Lucas Gonçalves Cunha, José Luis Braga, Antônio de Pádua Albuquerque Oliveira*. Anais do WER15 - Workshop em Engenharia de Requisitos, Lima, Perú, April 22, 23, and 24, 2015, pp . [\[pdf\]](#) [\[scholar\]](#) **Downloads: 32**

Abstract: A linguagem peculiar e a pluralidade de visões distintas exigem conhecimento e experiência do engenheiro de requisitos para o sucesso da atividade de extração de requisitos em domínios específicos. Neste trabalho, são apresentadas as ferramentas i*Get e TEKBS, que utilizam técnicas de inteligência artificial para auxiliarem o engenheiro de requisitos na extração de metas concretas e flexíveis, no contexto de iStar. A i*Get utiliza as “ações concretas” definidas no LAL enquanto a TEKBS as “ações flexíveis” combinadas com os sinônimos dos termos que representam essas ações, obtidos a partir do Wordnet. Os resultados são transformados em base de fatos da ferramenta CLIPS, e então processados usando uma base de regras de análise disparadas pela máquina de inferência do CLIPS. Resultados preliminares mostram que um número maior de requisitos são extraídos pelo engenheiro, melhorando o conhecimento sobre o domínio.

3 - **Improving Quality Model Construction Through Knowledge Reuse**. *Juan Pablo Carvalho, Xavier Franch, Carme Quer*. Anais do WER15 - Workshop em Engenharia de

[Metamodeling for Requirements Reuse](#)

Formato do arquivo: PDF/Adobe Acrobat

description make **requirements** reuse difficult. In this paper we present a meta- model to integrate some different types of semiformal diagrams into a require-.

[wer.inf.puc-rio.br/wer02/zip/Metamodeling_reuse\(6\).pdf](http://wer.inf.puc-rio.br/wer02/zip/Metamodeling_reuse(6).pdf)

- Implement your own search result page
- Relevancy based on downloads, title, abstract, etc.
- Auto-complete, Highlighting, Geo, etc.
- Everything in Lua

Moving to Elasticsearch!

MySQL => Elasticsearch

```
-- code to load luasql

local client = require"elasticsearch".client()
local conferences = query("SELECT * from conferences")

for conf in conferences do
    local bulk = {}

    table.insert(bulk, { index = { _type = 'conferences', _id = conf.id } })
    table.insert(bulk, conf)

    papers = query("SELECT * from papers WHERE name_conference = '" .. conf.name_conference .. "'")
    for paper in papers do
        table.insert(bulk, { index = { _type = 'papers', parent = conf.id, _id = paper.id } })
        table.insert(bulk, paper)
    end

    local res, err = client:bulk( { index = 'wer', body = bulk } )
    if not res then
        error("bulk request failed:" .. err)
    end
end
end
```

Data Modeling
