

CESANTA

Embedded Communication

V7

embedded JS VM

Marko Mikulić @CesantaHQ

Who is Cesanta?

- Irish Startup founded by ex-Googleers in 2013
- Makers of the Mongoose embedded web server, over 1M downloads since 2004
- Developers of Smart.js - full-stack, open source IoT platform
- Goal: make it easy for everyone to make connected devices

What is **v7**?

- Embedded JavaScript engine written in C
- Compliant to ISO C90 and ISO C++98
- Targets embedded systems
- Or C/C++ programs that need scripting engine
- Conforms to ECMA 5.1 standard
- Easy to embed: only two files, **v7.c** and **v7.h**
- Easy to use embedding API

Here's how to try out **V7**

- Open Source, under GPLv2/commercial license
- GitHub repo: <https://github.com/cesanta/v7/>

Why JavaScript?

	true	false	1	0	-1	"true"	"false"	"1"	"0"	"-1"	""	null	undefined	Infinity	-Infinity	[]	{}	[[[]]]	[0]	[1]	NaN
true	✓		✓					✓												✓	
false		✓		✓					✓		✓					✓		✓	✓		
1	✓		✓					✓												✓	
0		✓		✓					✓		✓					✓		✓	✓		
-1					✓					✓											
"true"						✓															
"false"							✓														
"1"	✓		✓					✓												✓	
"0"		✓		✓					✓										✓		
"-1"					✓					✓											
""		✓		✓							✓					✓		✓			
null												✓	✓								
undefined												✓	✓								
Infinity														✓							
-Infinity															✓						
[]		✓		✓							✓										
{}																					
[[[]]]		✓		✓							✓										
[0]		✓		✓					✓												
[1]	✓		✓					✓													
NaN

Why JavaScript?

- Why not Lua, Python, LISP, brainfeck, ...
- Well, why scripting ?

Why JavaScript?

- Everybody (thinks) to know (a bit of) it
- Popular, Widely available
- Maturing but not stagnating

Goals: V7 vs other JS VMs

- Portable
- Small runtime overhead
- Small code footprint
- Reasonably fast
- Simple

Techniques

- Implicit data structures
- Compacting GC
- Static object graph snapshots
- mmapping compiled bcode
- Coroutine based parser (segmented stack)

Simple example

```
#include <v7.h>

int main() {
    struct v7 *v7 = v7_create();
    v7_val_t res;

    v7_exec(v7, "function random() { return 42; }", NULL);
    v7_exec(v7, "function msg() { return 'foo'; }", NULL);

    v7_exec(v7, "random()", &res);
    printf("random number (really): %lg\n", v7_to_number(res));

    v7_exec(v7, "msg()", &res);
    printf("msg: %s\n", v7_to_cstring(res));

    v7_destroy(v7);
    return 0;
}
```

What is a value? naive approach

- tagged union?
- too much waste

```
struct Value {  
    union {  
        int boolean;  
        double number;  
        String *str;  
        Object *object;  
        /* more */  
    } u;  
    char type; /* type tag */  
    /* padding */  
};
```

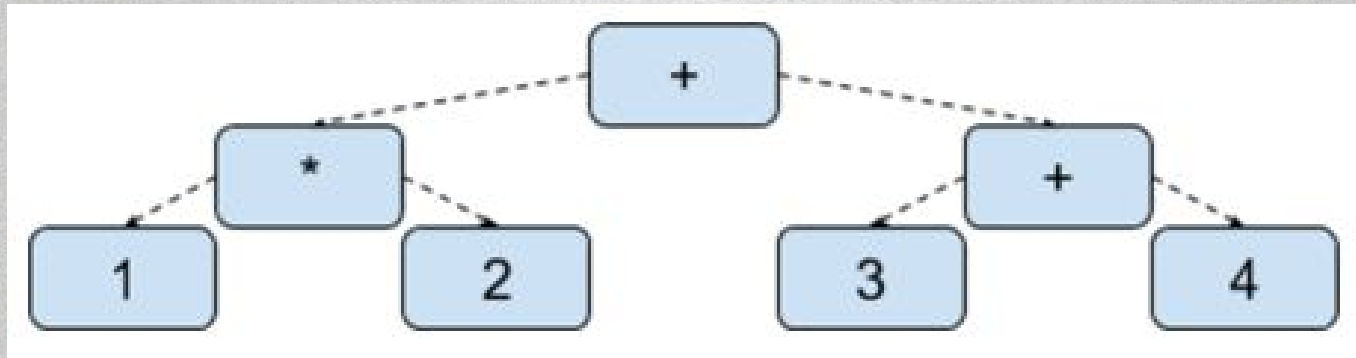

NaN packing

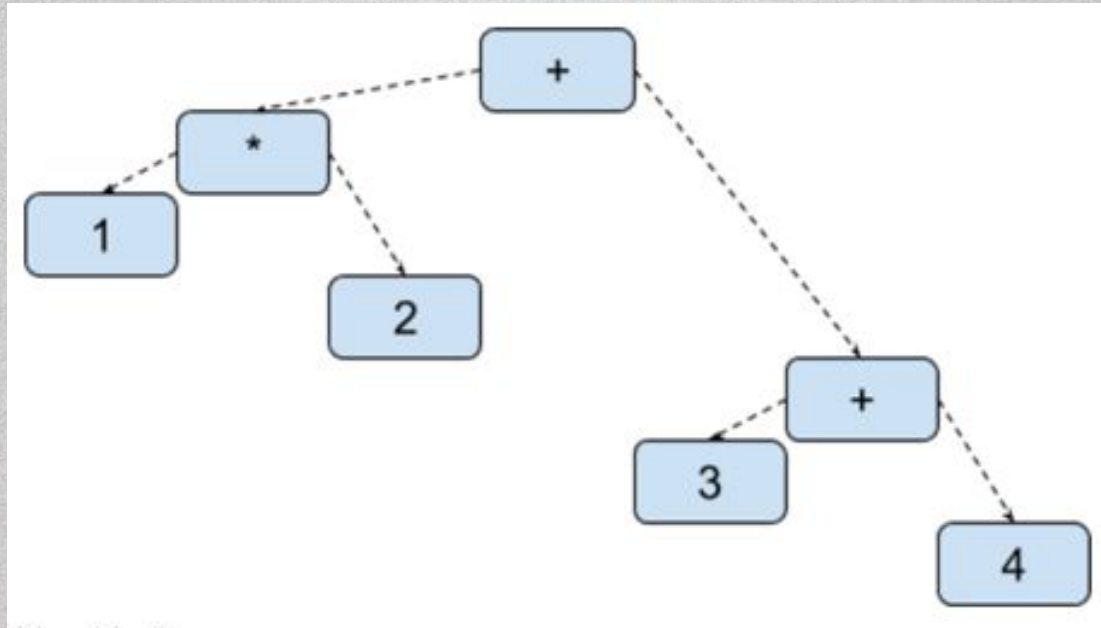

Implicit data structures

Implicit data structures are **data structures** with negligible space overhead; auxiliary information is mostly represented by permuting the elements cleverly

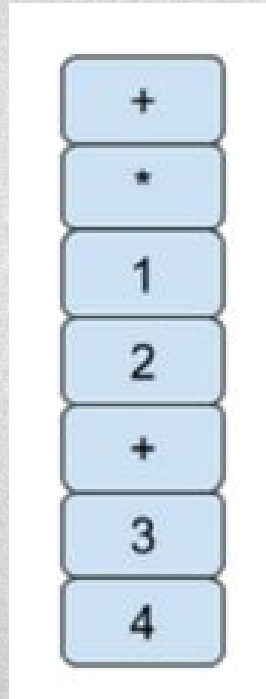

AST

AST

AST

AST - no pointers

(mostly)

Questions?
