Outline

Context

Goal of SIL2LinuxMP

- Generic qualification approach
- Suitable for up to SIL2 (IEC 61508 Ed 2)
- Support multicore systems
- Mainline kernel + glibc + tools
- Methods suitable for pre-existing SW intensive systems

The Goal

GNU/Linux
for
safety-related
systems -
SIL2LinuxMP

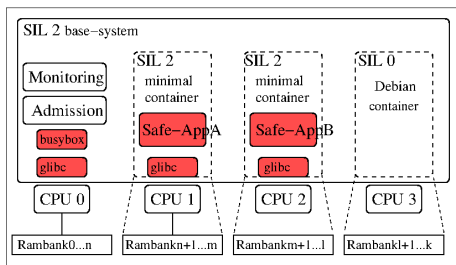

Nicholas Mc
Guire
<safety@osadl.>

Outline

Context

- Minimize kernel <-> follow mainline
- Minimize safety related runtime env
 - glibc
 - busybox runtime environment
 - Handle cgroups "manually" -> minimal launcher
- Compliant development of safety related applications
- Push the full-featured (non-safe) OS into a container
- Minimize/control sharing of resources between safe/non-safe tasks

Arch 4 - prototype architecture

Outline

Context

Selection has been formalized in the context of 61508-1 Ed 2 as Clause 7.X "E/E/PE safety-related software element selection" - pending review by TueV Rheinland.

Adjusted software DLC

Figure 6 – Software systematic capability and the development lifecycle (the V-model)

Adjusted software DLC

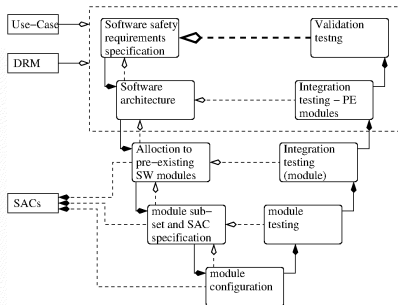

Figure 6 – Software systematic capability and the development lifecycle (the V-model)

Software systematic capability – V-model for pre-existing software

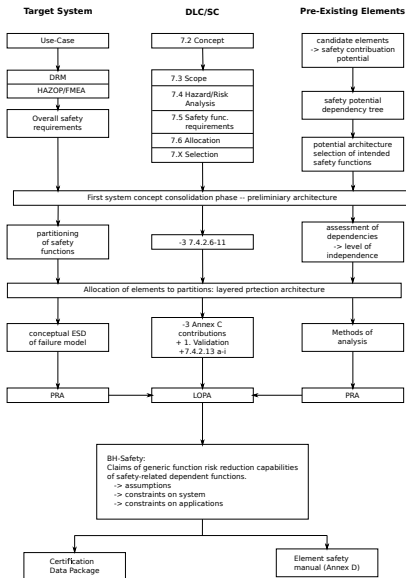

Example: Isolation Techniques

Available technologies to improve non-interference

- Control Groups
- Namespaces
- Seperate filesystem (images/media)
- Replicated glibc/busybox
- Limit system calls (seccomp)
- Real devices managed by core-system
- PALLOC - partitioning allocator
- ABI diversity

Functionality + level of assurance -> safety functional capability

Big picture of DLC/SLC

Outline

Context

- If you want to utilize FLOSS -> fix the processes first
- IEC 61508 was not really conceived with selection as primary strategy in mind - but it **is** doable.
- IEC 61508 is robust enough to provide a solid foundation for formalizing element selection (Route 3_S) as primary strategy
- The process adjustments are in review (TueV Rheinland)
... lets see
- Based on the final processes the method set will be selected
- Applying this to GNU/Linux RTOS will not be trivial - but looks doable

Thanks !
