What we’ll discuss today

▸ Why Would You Care?
▸ Quick Background
▸ State of Enterprise Linux 2023
▸ Conclusions
Why Would You Care?
Why Would You Care About The State of Enterprise Linux?

This talk might appeal to you if...

- You deeply care about open source like I have for the last 25 years
- Given all of the recent changes with CentOS, you believe that there is some sort of conspiracy! (I assure you there is not)
- You have strong opinions about how commercial interests play out with open source
- You are curious about what customers say to the people driving the roadmap for Red Hat Enterprise Linux
- You believe there are headwinds for open source, especially when it comes to AI/ML models, weights, and APIs
- You have a tiny bit of optimism in you and believe in positivity

Hi! It’s me Scott!

I believe in the power of community-driven open source!
"87% of the non-trivial commits to OpenSSL in the last 12 months were from 56 people paid by their employer to work on OpenSSL."
Quick Background
Some Quick Definitions

Agreeing on nomenclature is key to a productive discussion

- **Enterprise Software** is designed to meet the needs of large organizations or enterprises such as businesses, and governments rather than individuals. People don’t use things like SAP for fun at their house

- **Enterprise Linux** is a category of Linux operating systems that are specifically designed and optimized to meet the requirements of large-scale organizations and businesses.
  - Colloquially refers to Red Hat Enterprise Linux, rebuilds, and sometimes even the upstreams like CentOS Stream and Fedora
  - Will not cover Suse Linux Enterprise
  - Example: RHEL Workstation attempts to solve problems for organizations, not individuals per se

- **Ecosystem** has a specific meaning to Red Hat and refers to partners who build software on RHEL or hardware vendors that work with RHEL

- **Landscape** is the word I will use refer collectively to projects like Red Hat Enterprise Linux, CentOS Stream, Fedora, and rebuilds
The Fundamentals of Value Creation

This is how product managers think about products and services
Value Creation with Open Source

This is how product managers *ought to* think about products and services.

Critical Needs in The Enterprise Landscape

These are the new things

1. The **too fast or too slow** problem
2. The **how do I know?** problem
3. The **I need more** problem
4. The **AI as a mission critical workload** problem
The too fast or too slow problem
The Too Fast or Too Slow Problem

It’s similar to Solzhenitsyn...

“If only there were evil people somewhere insidiously committing evil deeds, and it were necessary only to separate them from the rest of us and destroy them. But the line dividing good and evil cuts through the heart of every human being. And who is willing to destroy a piece of his own heart?”

- Aleksandr Solzhenitsyn
The Too Fast or Too Slow Problem

Let’s take a stab at changing it...

“If only there were slow moving organizations somewhere insidiously committing slow deeds, and it were necessary only to separate them from the rest of us and destroy them. But the line dividing fast and slow cuts through the heart of every programmer, sysadmin and architect. And who is willing to destroy a piece of his own heart?”

- Scott McCarty at FOSDEM :-)

@fatherlinux https://www.linkedin.com/in/fatherlinux/
Demo: The Too Fast or Too Slow Problem

TTFOTSP
The how do I know? problem
The **how do I know?** problem

Not at all like Solzhenitsyn... :-)

“We have a very mature system for rolling out production updates. We can even roll back, by wiping a server and provisioning a server from scratch. Our automation is very mature. The problem is planning... we use the brain cycles of a lot of very smart people to do planning”

- Synthesized Red Hat Customer
The *how do I know?* problem
The I need more problem
The I need more problem

It’s all about the workload

“Since the time of Sun Tzu, long before Open Source, I have been waiting for Red Hat to bless Extra Packages for Enterprise Linux (EPEL) and make it easier for me to deploy new workloads, or upgrade existing workloads to new, unknown versions.”

- Synthesized Red Hat Customer
The AI as a mission critical workload problem

Really, this is the “how do I prepare my development paradigm for a hybrid-cloud environment” problem.
The AI as a mission critical workload problem

It’s really a hybrid-cloud problem

“I have an inner-loop of development where I need an OS and hardware acceleration, a training cluster, and a production environment. I need them all to be similar or the same to be secure, function the same for efficiency, and reduce risks”

- Synthesized Red Hat Customer
We’re all still learning
For a long time, we kinda thought open source was “done” but it’s not.

Open Source is Under Threat
Large swaths of the world are reevaluating if open source still works. Commercial interests pay for a significant portion of the development, so this is a threat.

Try to Be Kind & Humble
It’s easy to armchair quarterback, to tiptoe into conspiracy theories. If you feel angry and confident, that’s a warning sign.

It’s Exciting Again
There are periods where things seem to become boring, and other times when they’re quite interesting again. We’re in a phase where things are interesting again.

Conclusions

Pulling it all together
Technology and politics are changing quickly
Software Freedom is Important

Check out Ada & Zangemann
Thank you

Red Hat is the world’s leading provider of enterprise open source software solutions. Award-winning support, training, and consulting services make Red Hat a trusted adviser to the Fortune 500.
