

SUPSI

Visualising Wikipedia

A new tool that allows visualising groups of Wikipedia articles, analysing and monitoring them, supporting the work of volunteers, researchers, and institutions, and creating knowledge landscapes.

Iolanda Pensa

Senior researcher and head of the research area “Culture and Territory” Institute of design, SUPSI, iolanda.pensa@supsi.ch
Wikimedia Italia - National coordinator GLAM (volunteer)

Visualizing Sustainability and Climate Change is a project aimed at identifying and visualizing knowledge gaps related to sustainability and climate change on Wikipedia. The project helps measure these knowledge gaps, supports communities in improving content on this important topic, facilitates collaboration among multilingual communities and partners, and strengthens the capacity of Wikipedia contributors to document and share information on sustainability and climate change.

In practice, in collaboration with Wikimedia projects focused on sustainability and climate change, the initiative produces a visual tool that allows users to evaluate and monitor the quality and quantity of articles related to sustainability and climate change on Wikipedia across different languages.

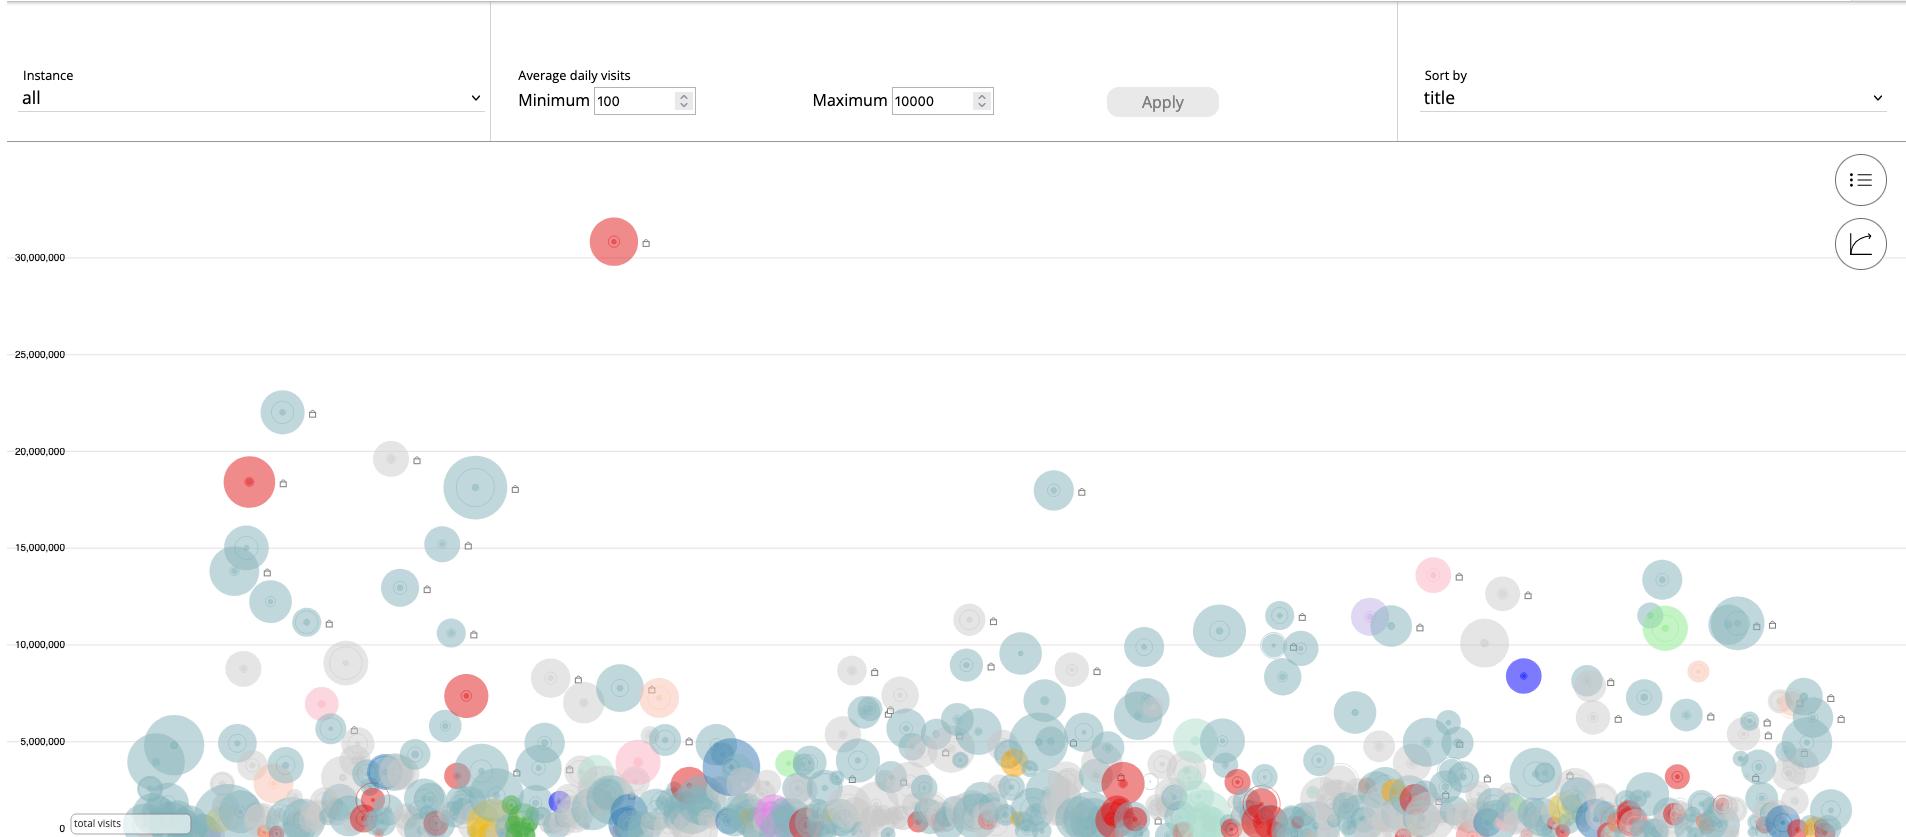

Credits

“Visual Analytics for Sustainability and Climate Change: Assessing online open content and supporting community engagement. The case of Wikipedia (2025-2029)” is a research project led by SUPSI, in collaboration with Wiki Education Foundation, Wikimedistas de Uruguay <https://wikimedistas.uy/>, Wiki in Africa <https://www.wikiinafrica.org/> and Open Climate Campaign <https://openclimatecampaign.org/>, with the endorsement of Wikimedia Italia and supported by the SNSF (10.003.183).

Research team: Iolanda Pensa (concept and principal investigator), Giovanni Profeta (coordinator and designer), Chiara Somajni, Florence Devouard, Sage Ross, Nicole Schwitter, Cristian Scapozza, Florian Maximilian Meier and Ahmed Amine Hassou.

The 2025-2029 research focuses on articles related to climate change and sustainability, aiming to assess the current state of coverage on these topics and test interventions. However, the tool developed can be applied to any topic, starting from Wikidata.

Rana (frogs)

54 Total Articles

Focus Period: September 2022 – January 2023

35 Student editors

Rana is a genus of frogs with dozens of species. This topic was the focus area for one very productive course: [https://dashboard.wikiedu.org/courses/Washington_University/Behavioral_Ecology_2022_\(Fall\)/home](https://dashboard.wikiedu.org/courses/Washington_University/Behavioral_Ecology_2022_(Fall)/home)

Target groups of the visualization tool

Volunteers

They are active contributors to Wikipedia and the Wikimedia projects. They need support in identifying what is missing and how they can contribute.

Institutions

They are associations and groups active in the Wikimedia movement, initiatives interested in specific content, and content providers such as universities and GLAMs. They need support in defining supporting strategies for volunteers, monitoring and evaluating the impact of their work and communicating the relevance of their work efficiently.

Researchers

They are academic scholars and citizen scientists interested in analysing and monitoring a selection of content or topics. They need to have access to an overview of specific topics on Wikipedia and information related to content quality, sources, and controversies.

Journalists

They are professionals working for journals. They need to have access to an overview of specific topics on Wikipedia and information related to content quality, sources, and controversies.

Teachers

Teachers are educators working in schools, universities, or other learning environments. They need access to reliable overviews of specific topics on Wikipedia, along with clear information about content quality, sources, and controversies, so they can guide students in developing critical thinking and media literacy skills.

Bubble Chart UI rework + variety of feature additions #44

Merged ragesoss merged 33 commits into [WikiEducationFoundation:master](#) from [Aminehassou:master](#) last month

Conversation 0 Commits 33 Checks 0 Files changed 18

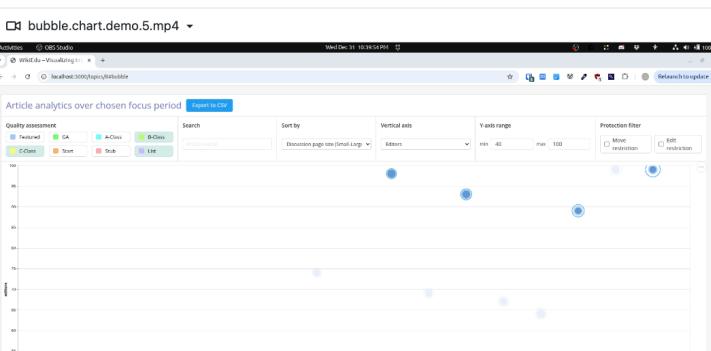

Aminehassou commented last month Collaborator ...

New Features

- Added a variety of filtering options for the analytics chart
 - Filter articles by assessment grade (Featured, GA, A-Class, B-Class, C-Class, Start, Stub, List)
 - Filter articles by restriction type (edit/move restriction)
 - Filter by min/max y-axis range
- Added sort features and more axis options
 - Sort by different x-axis values (Article title, Publication date, Linguistic versions, Article size, Lead section size, Discussion page size, Warning tags, Images)
 - Select between two y-axis units (Average Daily Views or Number of Editors)
- New tracked data points for articles (publication_date, linguistic_versions_count, warning_tags_count, images_count, number_of_editors, article_protections)
- UI rework based on https://meta.wikimedia.org/wiki/Visual_Analytics_for_Sustainability_and_Climate_Change/Tool/Co-design_activities
- Better responsiveness for smaller screens

Video

bubble.chart.demo.5.mp4

Improved topic editing for admins and a variety of bug fixes/changes #45

Merged ragesoss merged 11 commits into [WikiEducationFoundation:master](#) from [Aminehassou:master](#) 2 weeks ago

Conversation 0 Commits 11 Checks 0 Files changed 18

Aminehassou commented 2 weeks ago Collaborator ...

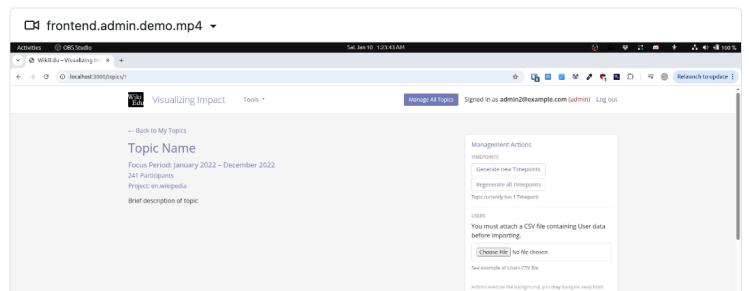

Closes #37
Closes #35

Changes

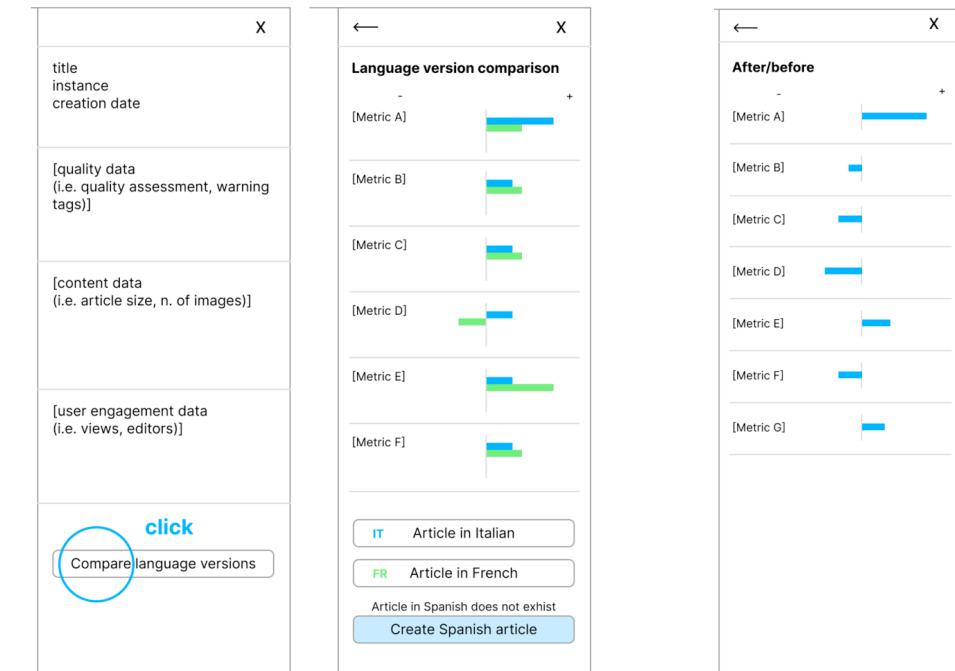

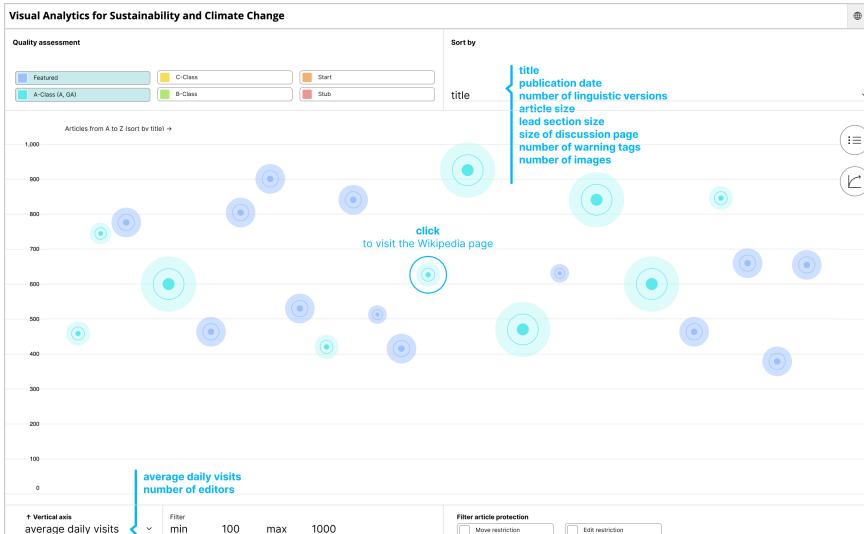

- New admin features
 - Edit topics from within the non-admin view
 - View every topic by pressing the "Manage All Topics" button
 - Added a red "(admin)" flag to display to users when they're logged in as admin
- Improved article importing process
 - Fixed some encoding issues that were causing articles that had commas and special characters in their titles to not be imported correctly
 - Added logging for redirects that cause duplicate article issues, this should allow for easier identification of duplicates
 - Improved error handling for dashboard user tool (now displays whether a user was not found in the toast error)
 - Modified filter logic for article protections
